

VACUUM DEHYDRATION SERVICES

WATER AND GAS REMOVAL

Water and gas contamination can cause extreme damage to bearings and hydraulics, and more importantly become a safety concern.

Up to 75% of mechanical failure can be attributed to particulate or water contamination in oil.

RelaDyne can safely and efficiently remove contaminants through Vacuum Dehydration Oil Purification and keep your systems running.

RelaDyne's large fleet of portable units includes vacuum dehydrators and specialized centrifugal separators with explosion proof electronic controls capable of use in large and small applications.

SERVICE HIGHLIGHTS

- Handles hazardous gases
- Requires no downtime
- Avoids costly bleed and feeds
- Includes emergency response capabilities
- On-site purification
- Large fleet of rental units
- Routine scheduled maintenance program available
- 24-hour service

Turbine oil with 8000 ppm of water before (left) and less than 50 ppm (right) following RelaDyne's Vacuum Dehydration Oil Purification process.
