

PQSC TECH Bulletins are published by the PQSC of Lubrication Systems Company for the purpose of disseminating information within the LSC organization. PQSC TECH Bulletins are used to inform LSC personnel and Agents of issues that effect the operation, application and use of LSC products and services. The information herein has been approved for dissemination within the LSC organization by the PQSC. This information is considered Company Proprietary and is not to be given to a non-LSC party without the written approval of the PQSC Chair Person. TECH Bulletins are posted in the Employee and Agent section of www.lsc.com.

Subject: LSC Gains ATEX Certification for LubriMist® and ThermoJet® Products

Lubrication Systems Company has received ATEX certification for a number of our products. The ATEX Directive (from the French ATmospheres EXplosibles) was approved by the European Union (EU) for establishing the regulations, which govern the installation of equipment used in areas where potentially flammable gases, vapors, mists or dust may be encountered. The directive became effective on July 1, 2003 and is applicable to all EU Member States.

Attainment of ATEX Certification of LSC products opens the way for our products not only into European markets, but also other world markets where products must comply with the Zone method of classification. Epsilon Compliance, located in the UK, issued the ATEX certifications. Additional information about Epsilon Compliance can be found at their website, www.epsilon-ltd.com.

The Products that have the ATEX certification are;

LubriMist Model IVT Oil Mist Generator

LubriMist Model VFP Oil Mist Generator

LubriMist Model VO Oil Mist Generator

ThermoJet Model H2000E Oil Purification System

ThermoJet Model G3000E Oil Purification System

Copies of the certification documentation can be viewed in the Products section of the LSC website. Select the "Certification" button when viewing the particular model.
